SUMMARY

Computer Science graduate with hands-on experience building production-ready backend systems in Java and Spring Boot. Built a fullstack e-commerce platform with microservices, Redis caching, OAuth2/JWT authentication, and Razorpay payment integration. Comfortable across the stack, from REST API design and database optimization to caching strategy and React frontend integration. Seeking an entry-level Backend/Software Developer role.

EDUCATION

Bachelor of Science, Computer Science — Ramakrishna Mission Vivekananda College | 2023–2026 | CGPA: 7.38/10

HSC — Kannada Sangha Higher Secondary School | 2021–2023

SSLC — Kannada Sangha Higher Secondary School | 2016–2021

PROJECTS

E-Commerce Platform (Spring Boot Microservices) [GitHub](#)

- Engineered a scalable e-commerce backend using Spring Boot microservices with an API Gateway for centralized routing
- Implemented Redis caching (@Cacheable, @CachePut, @CacheEvict) across services, resolving cache-key mismatches and Spring AOP self-invocation issues to keep data consistent
- Secured REST APIs with JWT authentication and OAuth2 social login (Google & Amazon) for seamless onboarding
- Integrated Razorpay payment gateway handling end-to-end order and payment processing, including refund failure handling
- Collaborated with a React frontend to deliver seamless API integration across 10+ endpoints

Notes Application (Spring Boot + JWT) [GitHub](#)

- Built a secure, RESTful notes management system using Spring Boot and MySQL with full CRUD functionality
- Implemented stateless JWT authentication, eliminating session overhead and improving API scalability
- Secured user passwords using BCrypt hashing, ensuring zero plain-text credential storage

CollegePortal (Servlets, JSP, JDBC) [GitHub](#)

- Architected a role-based web application supporting 4 distinct user roles (Admin, Faculty, Student, HOD)
- Implemented session-based authentication and authorization, enforcing strict role boundaries
- Designed optimized CRUD operations with a normalized relational schema, improving data retrieval efficiency by ~30%

SKILLS

Languages: Java, C, C++, Python (Basic)

Backend: Spring Boot, Spring Security, Hibernate, JDBC, REST APIs, JWT, Microservices, WebFlux, Docker (Basic)

Databases: MySQL, MongoDB, Redis, SQL

System Design: DNS, API Gateway, Load Balancing, Caching, Database Scaling, Message Queues, Monitoring

Testing & Tools: JUnit, Mockito, Postman, Git, GitHub

SOFT SKILLS

Attention to Detail, Team Work, Problem Solving, Accountability
